

KACHU HARISH

Senior QA Engineer | Manual & Automation Testing

+91 6300744486 • kachuharish189@gmail.com

PROFESSIONAL SUMMARY

QA Engineer with 5.5 years of experience delivering high-quality Web, Mobile, and Enterprise Applications through strong Manual, API, Database, and Automation Testing expertise across Healthcare, Insurance, Banking & Financial Services, and Gaming domains. Strong expertise in Functional, Integration, System, Regression, SIT, and UAT Testing with complete Requirement Traceability Matrix (RTM) management. Hands-on experience in Automation Testing using Selenium WebDriver with Java, implementing Page Object Model (POM) framework along with TestNG and Cucumber (BDD) for maintainable and scalable test automation. Experienced in REST API Validation, REST Assured Automation, JSON Verification, and Backend Data Validation. Proven track record of reducing production defect leakage through Risk-Based Testing and effective Defect Management using JIRA, HP ALM, and GitHub in Agile/Scrum environments.

CORE COMPETENCIES

- Manual Testing across Functional, Regression, Integration, System, and UAT.
- Automation Testing using Selenium WebDriver with Java, TestNG, and Cucumber (BDD).
- API Testing using Postman and REST Assured, including REST API validation, JSON response verification, and status code validation.
- Database Testing using SQL for backend data validation and data integrity checks.
- Web Application Testing and Mobile Testing (Android & iOS), including Cross-Browser Testing.
- Mobile analytics and event-tracking validation across Web, Android, and iOS using CleverTap and Mixpanel.
- Defect Tracking and Management using JIRA, GitHub, and HP ALM, including defect lifecycle and root cause analysis.
- Test Planning, Test Strategy, Test Case Design, and Requirement Traceability Matrix (RTM).
- Agile/Scrum delivery: Sprint Planning, Daily Stand-Ups, and Release Validation.
- Domain experience in Healthcare, Insurance, Banking & Financial Services, and Gaming.

TECHNICAL SKILLS

Testing Tools: JIRA, HP ALM / Quality Center, GitHub, Postman, Toad, FACETS, Tidal Scheduler, Selenium WebDriver, CleverTap, Mixpanel, BrowserStack

Automation Technologies: Java, Selenium WebDriver, TestNG, Page Object Model (POM), Cucumber (BDD), REST Assured

Testing Types: Manual, Functional, Regression, Integration, System, UAT, Smoke, Sanity, API, Database, Mobile, Web, Cross-Browser, Compatibility, UI/UX, Installation/Uninstallation, Interrupt, Network, Usability, Push Notification

Analytics Validation: CleverTap, Mixpanel, Mobile Event Tracking, User Property Validation, Web and App Analytics

Database: SQL, Oracle, MS SQL Server

Methodologies: STLC, SDLC, Agile / Scrum

Leadership & Collaboration: Knowledge Transfer, Team Mentoring, Cross-Functional Collaboration, Quality Advocacy

Operating Systems: Windows 11, Windows 10

WORK EXPERIENCE

Senior Software Test Engineer

Dec 2022 – Sep 2025

Head Digital Works Private Limited, Bengaluru

Project 1: A23 Rummy and A23 Poker (Gaming Domain)

- Analyzed Business Requirement Documents (BRDs) and User Stories for online gaming workflows, including Game Tables, Tournaments, Player Profiles, KYC, Add Cash, Redeem, Wallet, and Responsible Gaming; identified requirement gaps and edge cases before development.
- Designed and executed comprehensive Test Scenarios, Test Cases, and Test Data for Web, Android, and iOS platforms, covering Functional, Integration, System, Regression, Compatibility, UI/UX, Installation/Uninstallation, Interrupt, Network, Performance, Usability, Device, and Push Notification Testing.

- Created and maintained Automation Test Scripts using Selenium WebDriver, Java, TestNG, and Cucumber (BDD) for critical gaming workflows, including Login, Registration, Wallet Transactions, and Add Cash, improving regression coverage and execution efficiency.
- Performed API Testing using Postman, validating REST APIs, Request/Response Payloads, JSON Structure, Status Codes, Data Integrity, Wallet Transactions, Bonus Calculations, and Error Handling mechanisms.
- Developed and executed API Automation Scripts using REST Assured to validate REST APIs, including Authentication, Request Payloads, Response Schema, Status Codes, Response Time, and Database Verification.
- Validated end-to-end Payment Gateway workflows, including Add Cash, Wallet Balance Updates, Bonus Utilization, Withdrawals, KYC Verification, and Transaction History, ensuring accurate and reliable financial processing.
- Conducted UI Testing, UI/UX Validation, and Cross-Browser Testing across Chrome, Firefox, Edge, and Safari to ensure responsive design and consistent rendering across devices and resolutions.
- Logged, tracked, and managed defects using JIRA; performed Defect Triage and Root Cause Analysis for production issues, executed Regression Suites, and participated in Agile/Scrum ceremonies to support stable releases with minimal defect leakage.

Project 2: Cricket.com (Gaming Domain)

- Delivered end-to-end QA for Cricket.com Web and Mobile Applications (Android & iOS), performing Manual and Automation Testing to ensure stable releases for high-traffic applications with zero Sev-1 production defects.
- Designed and maintained 1,000+ Test Scenarios and Test Cases based on BRDs and User Stories using Boundary Value Analysis (BVA) and Equivalence Partitioning, maintaining RTM for complete requirement traceability.
- Built and executed Automation Test Scripts using Selenium WebDriver with Java, TestNG, and Cucumber (BDD), automating critical regression workflows and significantly reducing manual testing effort.
- Implemented a Page Object Model (POM)-based Automation Framework with reusable components to improve test maintainability and execution efficiency.
- Conducted API Testing using Postman, including Request/Response Validation, Status Code Verification, JSON Validation, and SQL Database Verification for backend data accuracy.
- Executed Functional, Regression, Smoke, Sanity, Integration, System, and UAT Testing, along with Cross-Browser, Compatibility, and UI Validation across multiple devices and platforms.
- Managed the complete Defect Life Cycle using GitHub and JIRA, including defect tracking, Root Cause Analysis, retesting, and regression testing to ensure high product quality.
- Worked in an Agile/Scrum environment, collaborating with developers and stakeholders, participating in Sprint Ceremonies, and preparing Test Plans, Test Strategies, and Test Summary Reports.

Programmer Analyst

Mar 2019 – Dec 2021

Cognizant Technology Solutions Private Limited, Chennai

Project 1: AmeriHealth Caritas (Healthcare & Medicaid Insurance Domain)

- Performed end-to-end Manual Testing for a US Healthcare Insurance product covering Provider Management, Member Enrollment, Eligibility, Claims Adjudication, Billing, Finance, Remittance, and EDI Claims Processing, ensuring enterprise-level application stability.
- Defined and implemented Test Strategy, Test Plan, Risk-Based Testing Approach, and Requirement Traceability Matrix (RTM), achieving 100% requirement coverage and reducing production defect leakage by 40%.
- Designed and executed 1,000+ Test Cases across SIT, UAT, and Regression cycles; performed Functional, System, Integration, Regression, and Negative Testing for complex healthcare workflows.
- Performed EDI Claims Testing by validating X12 EDI transactions, including 837 (Claims), 835 (Remittance Advice), 270/271 (Eligibility Inquiry/Response), and 276/277 (Claim Status), ensuring accurate healthcare data exchange between providers, payers, and clearinghouses.
- Performed Backend Testing and Database Validation using advanced SQL queries to verify Member, Claims, Provider, and Payment data across staging and data warehouse layers, ensuring data integrity and reconciliation accuracy.
- Validated the complete Claims Lifecycle, including Claims Intake, Adjudication Logic, Pricing Validation, Provider Reimbursement (EFT/Check), Payment Posting, and Financial Reconciliation, ensuring HIPAA compliance and regulatory adherence.
- Managed Batch Job Execution, File-Based Interfaces, and Data Load/Unload in FACETS using WinSCP and Tidal Scheduler, ensuring high-volume transaction processing with 99% accuracy.

- Managed the complete Defect Life Cycle using JIRA, including Defect Logging, Triage, Root Cause Analysis, Retesting, and Regression Testing, improving defect resolution turnaround time by 30%.
- Interacted directly with US clients for requirement clarification, defect discussions, and release validation.
- Collaborated with Product Owners, Business Analysts, Developers, and US clients in an Agile/Scrum environment, participating in Sprint Planning, Daily Stand-Ups, Retrospectives, and Release Planning.

Project 2: Ally Finance Auto Loan Application (Banking & Financial Services Domain)

- Performed end-to-end Manual Testing of an Auto Loan Application System used for vehicle loan processing, validating Customer Onboarding, Loan Eligibility Checks, and Loan Approval Workflows.
- Analyzed BRD, FRS, and User Stories to understand business requirements and created Test Strategy, Test Scenarios, Test Cases, and RTM to ensure complete requirement traceability.
- Executed Functional, Integration, System, Regression, Smoke, Sanity, and UAT Testing to validate end-to-end application functionality and ensure release readiness.
- Validated the complete Loan Application Lifecycle, including Customer Personal Details, Employment Information, Financial Data, Vehicle Information, and Loan Eligibility Rules.
- Verified Loan Calculation modules, including EMI Calculation, Interest Rate Validation, Repayment Tenure, and Down Payment Logic using multiple test data combinations.
- Applied Boundary Value Analysis (BVA) and Equivalence Partitioning (EP) techniques to design effective Test Cases and improve defect detection.
- Performed Negative Testing, Data Validation, and Error Handling Testing to ensure system stability with invalid and boundary input conditions.
- Conducted Cross-Browser and Compatibility Testing across Chrome, Firefox, and Edge to ensure consistent UI and functionality across environments.
- Performed Database Testing using SQL queries to validate backend data integrity, data consistency, and correct data mapping between application layers.
- Managed complete Defect Management and Defect Life Cycle in JIRA, including Defect Logging, Prioritization, Tracking, Retesting, and Regression Verification in an Agile/Scrum environment.
- Prepared Test Execution Reports, Defect Reports, and Test Summary Reports, providing clear test status and quality metrics to stakeholders and project teams.

EDUCATION

B.Tech, Electrical and Electronics Engineering

2014 – 2018

Vaageswari College of Engineering
